PROFILE

Hand-on full-stack developer with experience in developing modern web applications with ReactJS, Next.js, and Tailwind CSS for frontend. Experienced in both old-school and new-school database solutions like MongoDB and Supabase for backend development. Proven capability to provide end-to-end project solutions from idea to deployment, with all deliverables demonstrated through an extensive portfolio website. Interested in designing responsive, user-friendly applications while continuously expanding technical skills through personal projects.

WORK EXPERIENCE

Full Stack Developer Intern
Full Stack Web Developer Intern, theMonks.tech — Los Angeles, CA
(Remote) | October - Present

Web Development Projects

- Built various web apps and projects, using frameworks of JavaScript like React.js and Next.js, along with Tailwind CSS for styling and Backend tools like Supabase and MongoDB.
- Created easy-to-use APIs for third-party integrations, enhancing the functionality of existing applications without compromising on performance or security.
- All my projects are showcased in my portfolio website, made using React, along with Three.js
